

# Sketching

To get your drawing just right, start with a pencil sketch.

A **sketch** is a quick drawing of the basic shapes of your subject.

Your **subject** is what you have chosen to draw.

To draw this volcano, the artist started with a triangle and then cut shapes into it.

When you see the basic shapes that make a mountain, a character or any other subject will help you understand how to recreate them and invent your own!

Draw your sketch lightly so that it can easily be erased.

Once you are happy with how you have built your sketch you can add details.

Drag the side of your eraser over your sketch to erase any dark marks.

Finally, go over your lines with your Blendy Pen and color in your subject!
